

Break Through Traditional Technology Boundaries

- Would you like to see a live demonstration of VMware's ESX3.5 or Virtual Desktop Infrastructure (VDI)?
- Can't make it out of the office to go to an off-site demonstration?

No worries! We will come to you!

This January TechPower and VMware are teaming up to bring *The Value of Technology Demo Series* on the road to your office!

Learn How VMware ESX and VDI can help you:

- **Dynamically provision, migrate and manage** computing capacity across resource pools to changing business requirements
- **Provide high service availability** by automatically restarting virtual machines on live production servers in the event of server failure
- **Simplify drag-and-drop management capabilities** with topology maps and centralized configuration
- **Central administration of desktops from any location:** Manage virtual desktops in a data center where you can more easily perform upgrades, patches and desktop maintenance.
- **Streamline** desktop management to reduce operating costs and increase control.
- **Scalable management:** Store and manage thousands of virtual desktops on hundreds of physical servers from a single management console

Interested in setting up a demo at your location?
